Training for Today
2012

9 GCSE's B-C
Our Lady and St John
Catholic Arts College
2009

SKILLS

- Python
- JavaScript
- React
- NextJS
- C++

About

I'm Kris, I have a variety of experience in multiple sectors and am constantly looking to expand and enhance my skills. I thrive off problems that require creative solutions and enjoy bringing ideas to fruition.

I am currently looking for a trainee/junior React/NextJS Developer role and have recently completed a bootcamp to get closer to this goal. I am also learning C++ to broaden my skillset.

EXPERIENCE

Student

CODE Lancashire | 05/2023 - Current

12-week coding bootcamp which offers guided learning via group sessions. This course involved a final project where I created an online chat platform with NextJS. Communication with other students was key in aiding each other with any issues that came up during the building of our web applications.

- Learning concepts in HTML, CSS, Python, Databases, Machine learning, JavaScript, React and NextJS.
- Bringing all these concepts together to create a final project.

Operative

Sapphire Utility Solutions | 01/2022 – 05/2023

Involved in the Highways Department working across national sites for contracts overseen by United Utilities, Carnells, Amey, BT and various county councils. In this role I initially started with high pressure jetting of gullys, but after demonstrating technical aptitude, was quickly moved into a role that involved using the crawler camera for video surveys, survey plotting and reports of drainage infrastructure.

- Surveys of infrastructure using iPEK camera equipment alongside Kaarbontech.
- High pressure jetting of gullys, storm drains and BT boxes.

App Development Intern

Graham and Brown | 07/2018 – 09/2018

Worked on an internal mobile application that helped the business with customer service, customer retention and data collection of trends. During my 8-week internship, I was 1 of 4 interns involved and given full autonomy of the process of building a mobile app, with the assistance of the senior IT team if required. No specific roles in the team were given, but I quickly identified myself and others strengths and weaknesses and ensured the team worked as a cohesive unit.

- Aided with project management, user testing and stakeholder meetings.
- Designed front end using XAML alongside learning some basic C# to aid with the backend development. Xamarin forms was used for the framework.
